*Prices are given as a guideline only. The actual price will depend on the choice of services and may vary between service providers.

Effective and immediate results

Modern minimally invasive beauty treatment technology is used, which generally allows immediate results for anti-ageing treatments for the face and body, treatments for acne and stretch marks, cellulite and fat removal and other beauty treatments. Treatment can also be fitted in during a short visit to Estonia. Treatments and care are safe and tested and together with the equipment used, they have been passed by the American FDA (Food and Drug Administration) and the European Medicines Agency.

Top-quality equipment used for beauty treatments

Top-quality modern technology is used for beauty treatments, including the UltraPulse CO₂-laser, which can help remove acne scarring or tighten and rejuvenate skin with similar results to plastic surgery and fat transfer (Fat Graft) for breast and buttock augmentation, the method can also be used to correct tissue defects on any part of the body. Estonia is the first Baltic state to use the popular SmartlipoMPX™ laserlipo, that can access fat deposits and achieve skin tightening even on delicate areas like neck, forearms and knees.

Cosmopolitan training of doctors

The highly qualified medical specialists who carry out the treatments attend courses and conferences in places like New York, Miami, Paris, Monaco and Switzerland to keep abreast of the latest developments in their field.
