- The managers and majority owners the head surgeons, Dr Andrus Loog and Dr Tiit Meren
- Many patients are from Finland, Sweden and Norway

Experience in the world's best clinics

Our surgeons have long international experience and have practised as visiting surgeons in the world's leading clinics, including one of the best trauma hospitals in the world in Camp Bastion in Afghanistan. During more than twenty years of work, the Hospital of Reconstructive Surgery has carried out some 17,000 operations on 13,000 patients.

In the frontline of modern and innovative solutions

All the most modern methods for plastic surgery are used, together with the latest regenerative medicine techniques. Surgeons work closely with top specialists from the European Union and NATO to develop new treatment techniques and technologies. This can be seen in the completely new operating techniques using stem cells demonstrated recently at the clinic, where autologous stem cells from the patient's own body are transplanted to the damaged areas, where they can repair tissues and organs.

Outstanding and dedicated doctors

Patients frequently highlight how well the doctors communicate and explain their work and the medical diagnoses clearly to patients. Great value is placed on personal contact between doctor and patient.
